Project Planning For Sustainable Architecture

Think about....

1. What is the purpose of your building? (examples: apartment, restaurant, store, entertainment, etc)
2. In what ways will your building benefit people in the future?
3. How will your building be sustainable? What source of energy will it use?
4. What materials will it use? Are you using any recycled or unusual materials? (ex: bamboo, clay, sea grass, cork, coconuts, glass bottles)
5. What interesting shapes, lines and textures will you use?
6. Plan your drawings using linear perspective. Don't worry if they are not exact or go out of the box.
